ABOUT THE SOFTWARE

JeRango Warehouse Manager, an Inventory Software Management System [ISMS], is ***responsible for tracking goods and products*** of the business.

Aside from the tracking of goods and products, this software also ***logs incoming orders*** made by the business.

The software also has a built-in inventory analysis and report system that ***summarizes product data into reports*** that notify the business managers of the state of their inventory

DESIGN CONSTRAINTS

- ***doesn't utilize hardware parallel operation for other functionalities*** like automatic inventory tracking and hardware-supported expiry date counters.
- ***Limit testing may prove limited*** due to the available resources.
- ***Google's Firebase holds a database*** and is incorporated into ***JavaScript, CSS, and HTML*** to create the UX and UI of the application.
- ***System Clock*** is utilized for the tracking of stock expiry date

SOFTWARE REQUIREMENTS

The main functionalities of the system include:

- **User Authentication System**
- **Product Database**
- **Order Log**
- **Inventory Analysis and Reporting**
- **Data Recovery**

DEVELOPMENT LIMITATIONS

- ***Limited reads, writes, and deletes*** *of Firebase*
- ***Consistency and Linearity*** *of Code*
- ***Multi-user Integration*** *of Code through GitHub*
- ***Insufficient Storage*** *of Hardware*
- ***Lack of Experience*** *of the Developers*
